Frequently Asked Questions

Who is the audience?

Private sector entities—large
corporations, small to medium-sized
businesses, and non-profit organizations.

What makes PS-Prep™ different?

PS-Prep™ offers several options toward
preparedness: following best practices;
aligning to a standard; or certification.

Who oversees certification?

The American National Standards
Institute (ANSI)—American Safety for
Quality (ASQ) National Accreditation
Board (ANAB)

What is the difference between standards and best practices?

Best practices are the building
blocks on which standards are built.
Standards provide a management
system that includes policies,
processes, and best practices. Preparing
to the standards' best practices is a
step toward preparedness, ultimately
providing uniform planning within
the organization.

Private Sector Preparedness

Employee Pocket Guide

PS-Prep™ At-A-Glance

“Private organizations across the country—from businesses to universities to non-profit organizations—have a vital role to play in bolstering our disaster preparedness and response capabilities. These new standards will provide our private sector partners with the tools they need to enhance the readiness and resiliency of our nation.”

— Janet Napolitano

Secretary of the Department of Homeland Security

- A voluntary program;
- Mandated by Congress after 9/11, via the 9/11 Commission Act of 2007;
- Creates awareness and safeguards organizations against effects of a disruption—natural or man-made;
- Built on three standards adopted by Department of Homeland Security (DHS);
- A resource for continuity, recovery, and resiliency;
- PS-Prep™ can improve preparedness, no matter the size or scope of business; and
- PS-Prep™ is a critical resource for emergency management agencies across the nation.

The PS-Prep™ Message

As FEMA employees, you are invaluable ambassadors of the PS-Prep™ program. When informing audiences about this program, it's important to let them know they have choices. With PS-Prep™, interested parties may follow best practices, align to a chosen standard, or certify to a standard.

The ultimate message is to be prepared.

The Standards

PS-Prep™ offers three different standards for continuity and recovery processes, developed by preparedness experts. When implemented, these standards provide policy, processes, procedures, performance measures, and quality improvement practices that are updated regularly to ensure ongoing relevance. They are:

Disaster and Emergency Management and Business Continuity {NFPA 1600:2007/2010 editions}
www.nfpa.org

Organizational Resilience and Security Preparedness and Continuity Management {ASIS SPC.1-2009}

www.asisonline.org

Business Continuity Management {BSI BS 25999}

www.bsiamerica.com

For detailed information on the standards, direct interested parties to their respective sites. Applications for each standard may be found on www.anab.org
